## Wireless Wellworking

This CEU was based on research conducted over the last 8 years in the UK and further afield during a period of massive change in working practices from fixed allocated desks to a more agile nomadic work pattern. Our Ergonomist, Jim Taylour, has been shadowing the health consequences of some of these changes in working practices with Orangebox clients and focus groups and has captured the views of occupational health, human resources, facilities and the design community. We've got a few academic papers published and the references for these slides can be found in 'Mobile Generations'. As more organizations globally adopt similar working practices, by sharing lessons we've learned we hope this presentation and some of the tools developed can be applied to live projects to ensure more human centered design outcomes.

**Lisa Hoxter, Regional Sales Manager - Western US**

Coming from a family of artists, Lisa has always had an eye for interior design, furniture, and space planning. After studying fine arts, drawing and painting, she transitioned into the world of office furniture. Lisa has worked in the office furniture industry for 8 years, in mainstream workplace design and research. Research and innovation around the topics of nomadic and collaborative working have helped to fuel rapid growth for Orangebox in recent years, both in the UK and internationally. With work being increasingly defined as what we do rather than where we do it, Orangebox research and development continues to explore ways in which innovative design can connect people in a more productive and healthy way.
